DETAILED ACTION

1. Applicant's election without traverse of Group I invention (Claim 1) in the reply filed on 6/27/05 is acknowledged.

2. Claims 2-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Invention Group II-V, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 6/27/05.

3. Figures 13-21 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

4. Applicant's amendment to cancel nonelected claims 2-20 in response to this office action is advised.

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, because of the reasons as follows:

Regarding claim 1, it recites "a middle-high range luminance component compensation section for compensating for a middle-high range luminance component of a low-frequency

Art Unit: 2621

luminance signal generated based on the RGB image data such that the low-frequency luminance signal has substantially an ideal frequency luminance characteristic which is lower than or equal to a predetermined frequency”. While claim 1 does not recite the “means for” language, it does recites the function for “compensating”. In addition, the specification does use “means for compensating” in page 55 lines 11-12 and 14 for example. So, claim 1 constitutes “means plus function” type claim and it is considered a single mean claim, Therefore, claim 1 is subject to an undue breadth rejection under 35 U.S.C. 112, first paragraph. See MPEP 2164.08(a).

7. Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

In this case, claim 1 recites “a middle-high range luminance component compensation section for compensating for a middle-high range luminance component of a low-frequency luminance signal generated based on the RGB image data such that the low-frequency luminance signal has substantially an ideal frequency luminance characteristic which is lower than or equal to a predetermined frequency.” It is noted that the claimed of “a middle-high range luminance component of a low-frequency luminance signal generated based on the RGB image data” is not found supported by the instant specification.. For example, in figure 1 of the instant specification shows middle-high range luminance component YH is not part of the low frequency luminance signal YL. Furthermore, the low frequency luminance signal YL is not shown to include the middle-high range luminance component according to figure 1.
